

Customer Equipment Chain of Custody: Summary

What this is

A process and a form (frm-06-customer-equipment-chain-of-custody.docx) for tracking customer equipment that physically passes through Digital Origin's hands. The form travels with the equipment, recording every transfer of custody from receipt to final departure. Both parties sign at each transfer.

When to use it

Any time customer-owned equipment is in Digital Origin's physical custody, however briefly. This includes:

- A courier delivers a customer device to the office for build or refurb.
- You collect equipment from a customer site.
- A vendor ships hardware to us on a customer's behalf.
- Equipment moves between staff members internally.
- Equipment is dispatched out to a customer, courier, vendor, or disposal contractor.

It does **not** apply to customer equipment we only access remotely, or to our own internal tooling.

How it works

The system has three artefacts, each with a distinct role:

1. **The Halo ticket:** the live system of record. Holds the customer, equipment description, reason for custody, customer-data-bearing assessment, work status. Tells you what is currently in custody and why.
2. **FRM-06 (the form):** the field record. Physically travels with the equipment, signed at every transfer.
3. **FRM-07 (the register):** a closure-only archive. One row per processed form, used as a searchable index of completed chains.

Process flow

1. **Receipt.** The agent receiving the equipment prints a fresh FRM-06, completes Equipment Identification (customer, serial, ticket reference) and Initial Receipt (date/time, name, who handed over, condition). Confirms the Halo ticket reflects equipment-in-custody status; raises one if needed.
2. **In flight.** The form physically follows the equipment. Each transfer of custody gets a new row in the events table, signed by both parties. Condition observations go in the Condition column at the next transfer.
3. **Closure.** The closing custodian records the final transfer, completes the Form Closure section (open date, close date, event count, closer name), and returns the completed form to the Helpdesk Team Leader.
4. **Processing.** The Helpdesk Team Leader reviews the form for completeness, signs off, scans it onto the Halo ticket (or files it where no ticket exists), and adds a row to FRM-07.
